EndoZone™

Disposable Endoscopic Stapler With Gradational Compression Technology

ENDOZONE STANDARD, SHORT AND XL

EndoZone™

ENDOZONE STANDARD, SHORT AND XL

Gradational compression is built into the instrument rather than into the surgeon: the jaw closes in stages, giving fluid time to leave the tissue before the staples form. Thick tissue is handled by waiting, not by squeezing harder.

Articulation runs through eleven detented positions to a maximum of 45° left and right, and one black firing handle both clamps and releases, so the instrument can be driven with a single hand while the other keeps the field.

— Key Differentiators

01

Gradational compression

Staged jaw closure lets fluid leave the tissue before staple formation begins.

02

Eleven articulation stops

Detented positions to 45° either side, so the angle is repeatable rather than approximate.

03

One-handed operation

The black firing handle clamps and unclamps — no second control to find.

04

Enlarged release button

Spent reloads come off cleanly, including through a gloved, wet hand.

— Ordering — stapler bodies

CODE	DESCRIPTION	SHAFT LENGTH
FZH-SH	Endozone Short	60 mm
FZH-ST	Endozone Standard	160 mm
FZH-XL	Endozone XL	260 mm

A safety interlock prevents a spent reload from being fired a second time.

Secure and stable healthcare products

FourZone Healthcare develops and manufactures devices that improve patient outcomes and advance minimally invasive surgery. Everything in this catalogue is made to one standard, whether it is used in the first minute of a case or the last.
