

HAEMORRHOID STAPLER

Pile F TM

Disposable Circular Stapler For Haemorrhoids with MAC Technology

PILE F HAEMORRHOID STAPLER

Pile F™

PILE F ANVIL AND HEAD DETAIL

A stapled haemorrhoidopexy works because the resection happens in mucosa that has no somatic pain fibres. Pile F is built around that: a smaller diameter to limit tissue damage, a large housing to take the prolapse comfortably, and MAC clearance so the tissue drawn in is not crushed.

The annular cutter is integrated rather than assembled, which is what keeps the cut circular and the specimen intact for inspection.

— Key Differentiators

- 01

MAC technology
A minimum gap between anvil and cartridge protects tissue from over-pressure.
- 02

Reduced diameter
A smaller instrument through the anal canal means less trauma on the way in.
- 03

Large housing capacity
Takes a generous volume of prolapsed tissue in a single purse-string.
- 04

Integrated annular cutter
Better stability and cutting strength for a clean circular specimen.

— Ordering — haemorrhoid stapler

CODE	STAPLE HEIGHT	STAPLES
FZHPILES-34	3.8 mm	34

Indicated for resection of prolapsed rectal mucosa in the anal canal or of haemorrhoidal mucosa, restoring the normal anatomy of the low rectum. Supplied as a procedure kit with dilator, anoscope and suture threader.

Secure and stable healthcare products

FourZone Healthcare develops and manufactures devices that improve patient outcomes and advance minimally invasive surgery. Everything in this catalogue is made to one standard, whether it is used in the first minute of a case or the last.
